DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Report of One day Seminar on
Latest Trends in Project Design and Development
(Activity under MOU)
(22-10-2018)

A Seminar on "Latest trends in project Design and Development" (Activity under MOU) was conducted by the Department of Electronics and Communication Engineering on 22nd October, 2018 with the introduction of Mr. K. Vinay, Technical Engineer, Take Off Solutions, Tirupati.

This program was organized by Prof. L.Ramamurthy, Head of the department with the co-ordination of Mrs. S.Chandana, Assistant Professor, ECE Department.

The emerging trends in project management happening all around the world are:

1. The expansion of Artificial Intelligence (AI) & Automation: First and foremost, project managers should embrace AI in project management and then learn how to leverage it for successful project completion.
2. Inclusion of hybrid project management approaches: Use discretion to understand which methodology works best for a specific project. Smart project managers are opting for a mix of agile(able to move quickly and easily) and traditional methodology to get the best of both worlds.
3. The impact of emotional intelligence (EQ): learning the art of emotions and what drives people is becoming more important than ever to predict project success in the future.
4. More focus on data analytics and numbers: The smart and wise ones leverage the technological advancements to stay relevant. Data analytics, if used the right way has the power to produce a lot of business value.
5. Advanced project management tools and solutions: It goes without saying that project management tools are of much help to project managers to plan and deliver projects on time. They also give team members a platform to communicate and collaborate at a single place.
6. Increased remote working: Remote project management offers many benefits. The first one being more flexibility in the schedule and second, not having to commute to the office every day.
